ERGA WANDA AFRIZA

Full Stack Developer

ewandaafriza@gmail.com | +62 882-9106-7259 | github.com/ErgaWanda | linkedin.com/in/erga-wanda-afriza-147564211 | ergaporto.netlify.app

PROFESSIONAL SUMMARY

Full Stack Developer specializing in building scalable backend systems and responsive frontends for production applications. Sole developer behind a live government certification platform serving 450+ participants and 50+ assessors across 12 test centers, handling everything from system architecture to deployment. Proficient in Golang, Laravel, React, Vue.js, and C#/.NET, with hands-on experience integrating machine learning models (BERT, Random Forest, XGBoost) into user-facing products for sentiment analysis and predictive analytics.

CORE SKILLS

Programming Languages: JavaScript, Golang, Python, Kotlin, C#, HTML, CSS

Backend & Frameworks: Golang (Echo), Laravel, CodeIgniter, Node.js, ASP.NET / .NET

Frontend: React, Vue.js, Tailwind CSS

Databases: PostgreSQL, MySQL, Redis

AI & Machine Learning: Computer Vision, Sentiment Analysis, CNN, Naive Bayes, BERT, Random Forest, XGBoost

DevOps & Architecture: Docker, Nginx, Git, Postman, RESTful API Design, MVC Pattern

WORK EXPERIENCE

Full Stack Developer | LSP CoachPro Indonesia (Maganghub Kemnaker Program) *December 2025 – June 2026*

- Sole full stack developer responsible for architecting, building, and deploying a certification management platform from scratch, digitizing the full assessment workflow for a national government training program.
- Scaled the platform to support 50+ active schedules, 50+ assessors, and 450+ participants (asesi) across 12 test centers (TUK), processing 450+ competency evaluations and issuing 130+ certificates.
- Built a scalable backend with Golang and PostgreSQL, implementing Redis caching to reduce API response time and support concurrent access from 50+ simultaneous assessors during peak assessment periods.
- Deployed and maintained the production system independently using Docker and Nginx on a VPS, ensuring stable uptime for 450+ active users with zero dedicated DevOps support.
- Designed a responsive Vue.js interface that streamlined the certification review process for administrators and assessors, cutting manual review time.

Software Engineer Intern | Pusdatin, Ministry of Defense of the Republic of Indonesia *June 2024 – December 2024*

- Designed and delivered 3 internal management systems (Employee Information Portal, Activity Calendar, Daily Report System) within a 6-month internship using Laravel, Vue.js, and MySQL.
- Digitized employee record management across multiple departments, replacing manual, paper-based processes and speeding up data retrieval.
- Implemented real-time synchronization for departmental event scheduling, reducing manual coordination and minimizing scheduling conflicts.
- Automated daily activity reporting, replacing manual paperwork and improving the speed and accuracy of supervisor evaluations.

PROJECTS

CoachPro Certification Management System — *sertifikasi.coachpro.id*

Tech Stack: Golang (Echo), Vue.js, Tailwind CSS, PostgreSQL, Redis, Docker, Nginx

- Solo-developed and launched a live, in-production platform now serving 450+ participants, 50+ assessors, and 12 test centers, with 130+ certificates issued to date.
- Designed the database schema and API architecture to handle concurrent access at scale, using Redis caching to reduce query latency under load.

LogSkyGroup Company Profile Website — *logskygroup.com*

Tech Stack: React (Vite), Custom CSS (Design Tokens)

- Solo-developed and deployed a live company profile website for LogSkyGroup using React with a modular architecture (custom hooks, reusable components, organized assets/data layers).
- Implemented a token-based CSS design system (tokens.css, globals.css) for consistent, maintainable styling across the site.
- Independently managed the project end-to-end, from development to production deployment, now live at logskygroup.com.

Website Sentiment Analysis — *Universitas Darma Persada*
Tech Stack: Python, Naive Bayes, MySQL, Vue.js

- Built a web-scraping and machine learning pipeline to classify public sentiment toward Universitas Darma Persada from online text data.
- Designed an interactive Vue.js dashboard visualizing real-time sentiment trends for stakeholders.

Sentiment Analysis: Shell vs. Pertamina Purchase Policies
Tech Stack: Python, BERT, Transformers

- Fine-tuned a BERT-based NLP model to analyze public sentiment on fuel purchase policy changes, capturing nuanced context beyond simpler classification methods.

Algorithm Comparison for Instagram Engagement Optimization — *PT. BRIllian Indah Gemilang*
Tech Stack: Python, Random Forest, XGBoost, Vue.js, PostgreSQL

- Built a predictive analytics tool benchmarking Random Forest against XGBoost to identify the higher-performing model for engagement prediction.
- Analyzed social media data to generate actionable recommendations for increasing Instagram engagement.

Employee Information Portal — *Pusdatin, Ministry of Defense*
Tech Stack: Laravel, Vue.js, MySQL

- Developed a centralized portal to manage employee data and streamline information access across departments.

Departmental Activity Calendar System — *Pusdatin, Ministry of Defense*
Tech Stack: Laravel, Vue.js, MySQL

- Built a real-time scheduling system to coordinate official events and departmental activities.

Daily Employee Activity Report System — *Pusdatin, Ministry of Defense*
Tech Stack: Laravel, Vue.js, MySQL

- Digitized daily reporting, replacing manual paperwork and improving data accuracy for internal evaluations.

EDUCATION

Bachelor of Information Technology *2021 – 2025*
Darma Persada University | GPA: 3.23 / 4.00
